**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what the term "element" is referring to in line 6 of Claim 1.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bergeron et al (US 5,988,345) in view of Watabe (US 5,195,739).

Bergeron discloses a bill validator having two halves in an L-shape and a note storage box (200) (see figure 1), the validator having optical entrance sensors (46), validation sensors (60 and 64). Note that it is considered inherent that the gears and shafts connected to a the bill validator motors have an optical encoder that senses the rotations of the motor or shaft and sends this information to the controller (300). See figure 24.

Art Unit: 3653

Note that official notice is taken that it would have been obvious that entrance sensors would have been used to detect the incoming bill to the validator.

Bergeron does not expressly disclose, but Watabe discloses a non-return security means (29) (see figure 2) used in a bill validator.

Both Bergeron and Watabe are considered analogous art because they concern bill handling.

At the time of the invention, it would have been obvious to one of ordinary skill in the art to have used the bill non-return means as taught by Watabe in the bill validator of Bergeron.

The suggestion/motivation would have been to prevent bills from being pulled out of the validator. See Watabe, col. 1, lines 42-48.
